The 2018 Arctic Sea Ice Minimum; Non-State and Subnational Climate Action

Two short presentations in one...
First I will give a brief summary of this year's Arctic sea ice minimum and see how and where it fits into the "big picture". This will be followed by a presentation about non-state and subnational activities to do something about climate change -- actually, the Paris Agreement is not everything: Many cities, regions and also big companies have made commitments towards reduction of greenhouse gas emissions. Can this have an impact on the course of global warming?
