

Product User Guide and Specification (PUGS) – ANNEX D for products XCO2_EMMA, XCH4_EMMA, XCO2_OBS4MIPS, XCH4_OBS4MIPS (v4.3, 01/2003-06/2020)

C3S_312b_Lot2_DLR – Atmosphere

Issued by: Maximilian Reuter, University of Bremen,

Institute of Environmental Physics (IUP)

Date: 18/02/2021

Ref: C3S_D312b_Lot2.3.2.3-v3.0_PUGS-GHG_ANNEX-D_v5.0

Official reference number service contract: 2018/C3S_312b_Lot2_DLR/SC1

This document has been produced in the context of the Copernicus Climate Change Service (C3S).

The activities leading to these results have been contracted by the European Centre for Medium-Range Weather Forecasts, operator of C3S on behalf of the European Union (Delegation Agreement signed on 11/11/2014). All information in this document is provided "as is" and no guarantee or warranty is given that the information is fit for any particular purpose.

The user thereof uses the information at its sole risk and liability. For the avoidance of all doubts, the European Commission and the European Centre for Medium-Range Weather Forecasts has no liability in respect of this document, which is merely representing the authors view.

General definitions

Table 1 lists some general definitions relevant for this document.

Table 1: General definitions.

Item	Definition
XCO ₂	Column-averaged dry-air mixing ratios (mole fractions) of CO ₂
XCH ₄	Column-averaged dry-air mixing ratios (mole fractions) of CH ₄
L1	Level 1 satellite data product: geolocated radiance (spectra)
L2	Level 2 satellite-derived data product: Here: XCO ₂ and XCH ₄ information for each ground-pixel
L3	Level 3 satellite-derived data product: Here: Gridded XCO ₂ and XCH ₄ information, e.g., 5°x5°, monthly
L4	Level 4 satellite-derived data product: Here: Surface fluxes (emission and/or uptake) of CO ₂ and CH ₄

Scope of document

This document is a Product User Guide and Specification (PUGS) for the Copernicus Climate Change Service (C3S, <https://climate.copernicus.eu/>) greenhouse gas (GHG) component as covered by project C3S_312b_Lot2.

Within this project satellite-derived atmospheric carbon dioxide (CO₂) and methane (CH₄) Essential Climate Variable (ECV) data products are being generated and delivered to ECMWF for inclusion into the Copernicus Climate Data Store (CDS) from which users can access these data products and the corresponding documentation.

The satellite-derived GHG data products are:

- Column-averaged dry-air mixing ratios (mole fractions) of CO₂ and CH₄, denoted XCO₂ (in parts per million, ppm) and XCH₄ (in parts per billion, ppb), respectively.
- Mid/upper tropospheric mixing ratios of CO₂ (in ppm) and CH₄ (in ppb).

This document describes the C3S products XCO₂_EMMA, XCH₄_EMMA, XCO₂_OBS4MIPS, and XCH₄_OBS4MIPS.

These products are merged multi-sensor XCO₂ and XCH₄ Level 2 and Level 3 products generated using algorithms developed at University of Bremen, Germany (see D2).

Executive summary

The EMMA database consists of individual level 2 soundings retrieved by algorithms which can change from grid box to grid box and month to month. It can be used in the same manner as any other XCO₂ or XCH₄ satellite retrieval, i.e., the EMMA database includes all information needed for inverse modeling (geo-location, time, XCO₂ or XCH₄, averaging kernels, etc.).

The data fields and guidance on their use are provided in the main PUGS document (*D1*) describing, e.g., the common variables of all XCO₂ and XCH₄ L2 data sets provided by the Copernicus C3S_312b_Lot2 sub-project.

Additionally, to the common variables, EMMA includes information on, e.g., the inter-algorithm spread which informs about potential regional uncertainties and on the source-algorithm of each individual sounding within the EMMA data base. Such variables are subject to this ANNEX describing the EMMA v4.3 CO₂ and EMMA v4.3 CH₄ specific aspects of the EMMA L2 data base.

The L3 data products XCO₂_OBS4MIPS and XCH₄_OBS4MIPS are generated by spatial (5°x5°) and temporal (monthly) gridding of the corresponding EMMA L2 data bases. Additional information to what can be found in this document about the data format, content, and user guidelines can be obtained from the main PUGS document (*D1*).

1. Product description

1.1 EMMA products

Additionally to the common variables described in the main PUGS document (*D1*) the EMMA L2 data base includes the variables listed in **Table 2** and described in the following. **Table 3** lists all individual sensor / individual algorithm Level 2 products, which have been used as input for the generation of the EMMA XCO₂ and XCH₄ products.

Table 2: EMMA v4.3 CO₂ and EMMA v4.3 CH₄ specific variables.

Name	Type	Dimension	Units	Short Description
median_processor_id	Integer	n	[-]	A unique ID for each L2 algorithm contributing to EMMA
median_uncertainty	Float	n	For XCO ₂ : ppm, i.e., 10 ⁻⁶ For XCH ₄ : ppb, i.e., 10 ⁻⁹	Inter algorithm spread defined as standard deviation of the L3 products in the corresponding grid box (see <i>D2</i>)
median_uncertainty_se	Float	n	For XCO ₂ : ppm, i.e., 10 ⁻⁶ For XCH ₄ : ppb, i.e., 10 ⁻⁹	Standard error of the median uncertainty (see <i>D2</i>)
median_uncertainty_ex	Float	n	For XCO ₂ : ppm, i.e., 10 ⁻⁶ For XCH ₄ : ppb, i.e., 10 ⁻⁹	Inter-algorithm spread as expected from measurement noise (see <i>D2</i>)
<xco2 xch4>_accuracy	Float	n	For XCO ₂ : ppm, i.e., 10 ⁻⁶ For XCH ₄ : ppb, i.e., 10 ⁻⁹	Potential spatio/temporal XCO ₂ or XCH ₄ bias (1-sigma) estimated from TCCON co-locations (see <i>D2</i>)
contributing_algorithms	Byte	n	[-]	Number of L2 algorithms contributing to median calculation in a specific grid box

Description of each parameter:

median_processor_id

A unique ID for each L2 algorithm contributing to EMMA v4.3 CO₂ and CH₄. See listing in **Table 3**.

median_uncertainty

Inter algorithm spread defined as standard deviation of the L3 products in the corresponding grid box (see *D2*).

median_uncertainty_se

Standard error of the median uncertainty (see *D2*).

median_uncertainty_ex

Inter-algorithm spread as expected from measurement noise (see *D2*).

<xco2/xch4>_accuracy

Potential spatio/temporal XCO₂ or XCH₄ bias (1-sigma) estimated from TCCON co-locations (see D2).

contributing_algorithms

Number of L2 algorithms contributing to median calculation in a specific grid box.

Table 3: Unique L2 algorithm IDs used in EMMA v4.3 CO₂ and CH₄.

ID	Quantity	Instrument	Name	Version	Institution
2	XCO ₂	SCIAMACHY	BESD	v02.01.02	IUP

1.2 OBS4MIPS products

Obs4MIPs (Observations for Model Intercomparisons Project) is an activity to make observational products more accessible especially for climate model intercomparisons.

The XCO₂_OBS4MIPS and XCH₄_OBS4MIPS data products are in Obs4MIPs NCDf format, which is described on the Obs4MIPs website: <https://www.earthsystemcog.org/projects/obs4mips/>.

The XCO₂_OBS4MIPS and XCH₄_OBS4MIPS products are generated by spatial (5°x5°) and temporal (monthly) gridding of the corresponding EMMA L2 products.

The OBS4MIPS L3 products include the variables listed in **Table 4** and described in the following.

Table 4: XCO₂_OBS4MIPS and XCH₄_OBS4MIPS variables. x, y, z, t, represent the number of grid points in longitude, latitude, pressure, and temporal direction.

Name	Type	Dimension	Units	Short Description
time	Float	t	Days since 1990-01-01	Time center
time_bnds	Float	t,2	Days since 1990-01-01	Time boundaries
lat	Float	y	Degrees north	Latitude center
lat_bnds	Float	y,2	Degrees north	Latitude boundaries
lon	Float	x	Degrees east	Longitude center
lon_bnds	Float	x,2	Degrees east	Longitude boundaries
pre	Float	z	Surface pressure	Pressure center
pre_bnds	Float	z,2	Surface pressure	Pressure boundaries
land_fraction	Float	x,y	1	Land area fraction
<xco2 xch4>	Float	x,y,t	1	Satellite retrieved column-average dry-air mole fraction of CO ₂ or CH ₄
<xco2 xch4>_nobs	Integer	x,y,t	1	Number of individual L2 observations
<xco2 xch4>_stddev	Float	x,y,t	1	Standard error
<xco2 xch4>_stddev	Float	x,y,t	1	Standard deviation
column averaging kernel	Float	x,y,z,t	1	Column-averaging kernel
vmr_profile_<co2 ch4>_apriori	Float	x,y,z,t	1	A priori dry-air mole fraction profile

**Description of each parameter:*****time, time_bnds***

Time center and boundaries in days since 1990-01-01.

lat, lat_bnds

Latitude center and boundaries in degrees north.

lon, lon_bnds

Longitude center and boundaries in degrees east.

pre, pre_bnds

Pressure center and boundaries in units of surface pressure.

land_fraction

Land area fraction computed from GTOPO30 data available from the U.S. Geological Survey.

<xco2/xch4>

Main parameter: satellite retrieved column-average dry-air mole fraction of CO₂ or CH₄.

<xco2/xch4>_nobs

Number of individual L2 observations per grid box.

<xco2/xch4>_stddev

Standard error of the average computed from the single sounding noise and potential seasonal and regional biases, i.e., the inter algorithm spread.

<xco2/xch4>_stddev

Standard deviation of the L2 observations within each grid box.

column averaging kernel

The normalized column-averaging kernel represents the sensitivity of the retrieved XCO₂ or XCH₄ to the true mole fraction depending on pressure (height). All values represent layer averages within the corresponding pressure levels. Values near one are ideal and indicate that the influence of the a priori is minimal. Profiles are ordered from surface to top of atmosphere.

vmr_profile_<co2/ch4>_apriori

A priori dry-air mole fraction profile of atmospheric CO₂ or CH₄. All values represent layer averages within the corresponding pressure levels. Profiles are ordered from surface to top of atmosphere. The a priori profile is needed to apply the column averaging kernel.

2. Target requirements

The target requirements for these products are described in the Target Requirement Document (TRD) (see *D3*).

3. Data usage information

3.1 EMMA products

The EMMA database consists of individual level 2 soundings which can be used in the same manner as any other XCO₂ or XCH₄ satellite retrieval, i.e., the EMMA database includes all information needed for inverse modelling (geo-location, time, XCO₂ or XCH₄, averaging kernels, etc.). The main PUGS document (D1) provides guidance on how to use the information.

Figure 1 shows for an example month (April 2015) the EMMA XCO₂ and XCH₄ and the corresponding algorithm selected by the median (see D2). **Figure 2** shows the average inter-algorithm spread (01/2003 – 06/2020) and the expected average inter-algorithm spread due to measurement noise for XCO₂ and XCH₄.

Figure 1: EMMA L2 XCO₂ and XCH₄ (**left**) and corresponding selected algorithm (**right**) for EMMA v4.3 CO₂ (**top**) and EMMA v4.3 CH₄ (**bottom**) at the example of April 2015.

Figure 2: Average inter-algorithm spread (01/2003 – 06/2020) (**left**) and expected average inter-algorithm spread due to measurement noise (**right**) for EMMA v4.3 CO₂ (**top**) and EMMA v4.3 CH₄ (**bottom**).

3.2 OBS4MIPS products

The XCO₂_OBS4MIPS and XCH₄_OBS4MIPS products consist of spatially (5°x5°) and temporal (monthly) gridded EMMA L2 data. Among other parameters, the data files include averaged XCO₂ or XCH₄ satellite retrievals and uncertainties, column averaging kernels, and a priori profiles. The main PUGS document (*D1*) provides guidance on how to use this information.

Figure 3 shows for an example month (April 2015) the OBS4MIPS XCO₂ and XCH₄ and the corresponding uncertainty computed from the retrieval noise and EMMA's inter-algorithm spread (see *D2*).

Figure 3: Top: XCO₂_OBS4MIPS XCO₂ for April 2015 (**left**) and its uncertainty computed from the retrieval noise and EMMA's inter-algorithm spread (**right**). **Bottom:** Same for XCH₄_OBS4MIPS.
